The U.S. lift Truck division situated in Cleveland has a professional team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's original home-based forklift marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a nationwide machinery expansion project. Early product sales of this industrial equipment focused on large business groups, the armed services and on state-run corporations. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical education grew to become the new focus for improving quality and product development.

Domestic lift truck business for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's superior technological improvements combined with sales success placed them in a position of substantial expansion of their forklift business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the highly competitive North American materials handling market. This project proved highly successful for Daewoo and their lift truck product sales expanded greatly. In 1984, the company finished construction of a new facility to help in producing high end value-added products for export. In 1993, the company had a global sales system and started exporting versions they had established through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into international markets.
